I completed 126 rounds of 2,50 PLN on Baba Yaga Tales with an opening cash balance of 70 PLN. The first round gave 34,50 PLN, the next 49 winners — 7,50 PLN each, the remaining 76 — 0 PLN. Full payouts 402 PLN, turnover 315 PLN, net total +87 PLN, balance before withdrawal 157 PLN. The sequential log preserves a non-negative balance for each round; carrying the entire turnover into a single debit before all payouts is not used.

The regular deposit turnover has been completed: 315 PLN ≥ 2×70 PLN=140 PLN. The zero withdrawal fee in this episode is compatible with the operator's condition of a possible 20% retention in case of insufficient turnover. For the author's session, the welcome was not reactivated after cancellation.

Currencies and the full Polish payment list

The approved deposit and withdrawal lists are preserved verbatim in the passport. The following table breaks them down into separate rows and types: currency, bank, token, service and settlement infrastructure are not one type of entity. Inclusion in a column means inclusion in the corresponding approved list; limits and a completed payment are indicated by a separate method/episode. A single token may have several networks, so the asset name does not automatically define the network.
